for free 6.03.2013 : Please Donate to help speed up future development. If you like what I am doing, please donate today to help the site get faster, and hopefully be a real force in the next step of beatmania game progress. 10.03.2013 : Version 3.2a is out! New game mode in addition to the coop game mode from before. + bug fixes. Thanks to all the people that helped test this version, it would not be possible without you. If you like this game and want to support the development of beatmania in more ways, please give a donation to get the game for free. If you buy the game, you also help me to keep on developing beatmania and other game projects, and I'll make sure to make beatmania for everyone as soon as possible. If you are a skilled game programmer, I would appreciate a game for free that requires a lot of programming and testing to make it work correctly. There are a lot of things to do with beatmania. 3.02.2013 : Version 3.1a is out! Fixed some minor bugs, and added another map in this new version. If you like this game and want to support the development of beatmania in more ways, please give a donation to get the game for free. If you buy the game, you also help me to keep on developing beatmania and other game projects, and I'll make beatmania for everyone as soon as possible. If you are a skilled game programmer, I would appreciate a game for free that requires a lot of programming and testing to make it work correctly. There are a lot of things to do with beatmania.Q: Is this a common / common practice for string replacement in Python? I've noticed that when you replace part of a string using some other string, it is common to either replace the other string with nothing, or prepend or append to it (while including it in the replace). Here is an example: >>> 'words'.replace('.', '?') 'words' >>> 'words'.replace('.', '?') 'wordstest' >>> 'words'.replace('.', '?') Is this normal Python behavior, or is this a bug? Is there any particular reason for this? A: This is very likely to be a side 82157476af
