We get $M=2, 3, \dots, 16$. From Figure \[fig:mapillaryrms\] we can see that for the both datasets, as the value of M increases, the RMS error decreases. The execution time increases for RMNS with larger value of M. Conclusion ========== In this paper, we presented an ensemble of regressors (RMNS) based on the notion of a feature-extractor. We propose a data-dependent joint optimization approach to achieve the best possible features. We also proposed a new ensemble approach and presented the theoretical as well as experimental results. Q: Updating SelectedItem for ICollectionView I have a property on my model, called Items, which is a virtual collection defined as ICollectionView. I want to update the SelectedItem property on my view every time a new item is added to the model Items. I'm binding my Items property to the ItemsSource property of the view, but nothing is actually being selected. Is there a way of binding to this property to update the SelectedItem? I've seen this post but I'm not quite sure what to do. A: Use the 82157476af
